QuickBooks Desktop with Summit Hosting

Why host your QuickBooks Desktop in the cloud with Summit Hosting?

At Summit Hosting, we offer you a *dedicated, private* server that provides you with:

1. Access to all of your clients' data from 1 login
2. Access to your server from anywhere
3. Protection from natural disasters
4. 24/7/365 U.S-based server support
5. Decreased hardware and IT expenses
6. And so much more!

Other cloud hosting providers rely on "farm shared" server environments which means you share server resources with all of that provider's clients. "Farmed shared" server environments have been proven to be an outdated and precarious method when it comes to securing your data. It only takes one user to have a malware issue. The next thing you know, it spreads to your company files, and your precious company data has been compromised beyond repair.

At Summit Hosting, you and your client's data is completely isolated from our other clients. You enjoy better server performance, customization, security, and an overall better user experience as an added benefit. Plus, you get admin rights to our servers to install any application you want. Other providers, especially those who offer "farm shared" hosting solutions, do not provide this feature.

There are plenty of other reasons you should move your data to the cloud with Summit Hosting. To learn more, please contact me using the information below. I am happy to help and answer any questions you may have to find the right solution for your business.
